

Wi-Med

**INCREASE YOUR ABILITY
TO MAKE EARLIER, MORE INFORMED
CARE DECISIONS.**

Wi-Med® is a non-invasive, portable patient assessment and telemedicine platform that allows you to send and review data anywhere in the world. Wi-Med's comprehensive hemodynamic status and total body water reports provide the data you need to properly manage chronic diseases.

TRENDING — See how your patients are doing, at a glance, from any internet enabled device.

METRICS — In addition to traditional vital signs, Wi-Med gives you comprehensive hemodynamic status reports.

ASSESSMENT — Non-Invasive, Portable, Automated

MEASUREMENTS —

WVSM®: HR, NIBP, SpO2, ECG, Pleth

NiCaS: SI, CO, CI, RR, SV, CPI, TPR, BMI, TPRI, Total Body Water

CO2: etCO2, FiCO2, RR

Wi-Med® is a secure HIPAA compliant system of applications designed to monitor and transmit both on-site and remote patient data to medical care providers. Patient data is uploaded to the Wi-Med Net web application via the Wi-Med Mobile app. Any other connected monitoring device is uploaded through the Wi-Med Home app. A remote care provider can then log onto Wi-Med Net to view trending patient data.

Applications

COMMUNITY PARAMEDICINE

More information allows you to make more informed patient care decisions in the field.

CHRONIC DISEASE MANAGEMENT

Automatic trending clearly illustrates any change in patient status.

TELEMEDICINE

Connect providers and patients via any internet-enabled device.

RURAL HEALTH

Send cath lab level information without having to transport.

HOME HEALTH

Perform automated detailed assessments while patient remains comfortable at home.

CONCIERGE MEDICINE

Offer your patients a level of service and information they can get nowhere else.

MONITOR PATIENT COMPLIANCE

Determine if patients are following doctors orders and show patients progress.

DETAILED IN-OFFICE ASSEMENTS

Obtain cath lab type data from your patient while in the comfort of your office.
