*Multiple patients and devices connected simultaneously*

*User-friendly software for Windows, iOS and Android that is compatible with EHRs via an HL-7 Patch*

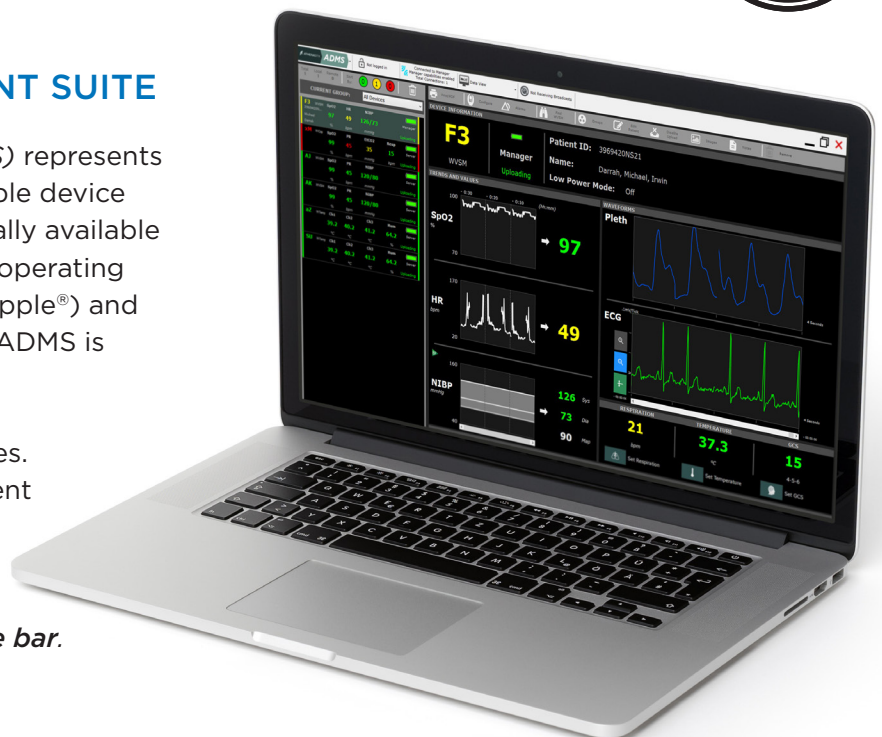

## ADMS™ ATHENA DEVICE MANAGEMENT SUITE

Athena Device Management Suite (ADMS) represents a breakthrough in multiple patient, multiple device connectivity. Compatible with commercially available off-the-shelf PCs, smart phones, tablets, operating systems (O/S) such as Windows®, iOS (Apple®) and Android. The flexibility of the innovative ADMS is unparalleled in today's connected world.

Expect more from your connected devices. The company that started the multi-patient wireless medical device revolution is transforming the industry again.

*ADMS is not only raising the bar... it is the bar.*

FDA cleared

Athena Device Management Suite (ADMS) is the new standard of connectivity

- Local and remote connectivity
- Color-coded vital signs for enhanced situational awareness
- Multi-device connectivity
- Compatible with Windows, Android, and iOS

## ADMS FEATURES

ADMS allows multiple patients to be connected seamlessly with multiple medical devices.

ADMS receives vital signs data from a variety of devices and monitors, accurately communicates the data with color-coded displays, and allows bidirectional control of these devices. ADMS color codes and sorts the alarm status in the standard green when normal range, yellow when low priority and red when high priority alarm.

ADMS uses highly intuitive operability, HIPAA compliance, and encryption of critical PHI information and data. All FCC regulatory requirements are defined and established by the connected devices. An efficient HL-7 patch is available to ease Electronic Health Record compatibility.

*ADMS suits the rapidly-changing market and the need for mobile and remote transmission of medical data*

## APPLICATIONS

- Community Paramedicine
- Emergency Departments
- Active Tactical Scenarios
- Disaster Response
- Training and Fire Fighter Rehab
- Infectious Disease Treatment and Transport
